

Practical workshop of intrapartum Ultrasound

18.11.2022

KLINIK FLORIDSDORF

Practical workshop of intrapartum Ultrasound

Intrapartum complications require a prompt and efficient intervention by the labor ward multiprofessional team. Ultrasound has been recently suggested as a valuable and objective tool which may assist the clinician in the diagnosis and the management of the labor complications and lead eventually to an improved outcome. The main aim of this course is to present the role of ultrasound in the management of abnormal labor providing the labor ward team with all the basic theoretical and practical knowledge which are complimentary to the clinical skills and may optimise the final outcome.

This course is performed with the use of a high fidelity ultrasound friendly mannequin which has been developed for the combined clinical and sonographic training in the simulated management of intrapartum complications

Kind regards

Prof. Tullio Ghi, PhD

Programm

THE THEORY

- **Intrapartum US: how to do it? what to look at and what to measure? Sonographic diagnosis of malpositions and malpresentations; The added value of US before instrumental vaginal delivery (45 min)**

PRACTICAL SESSION

- **Interactive simulation with the US friendly mannequin (IUSIM) supervised by the faculty and followed by debriefing**
- **Intrapartum ultrasound**
- **Clinical and sonographic diagnosis of fetal head station and position and decision between operative vaginal delivery vs cesarean section**
